Weather Guard Factory Direct, Inc.
Trussville, AL

Dear Sir,

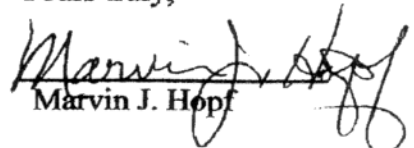

I am writing to your company to tell you how my new roof survived during the recent hurricane Katrina. I was very lucky to have had the new roof installed only a couple of weeks before the storm passed through the area to the west of our area.

I live on the east side of Mobile Bay and the area around our home sustained a large amount of damage. The water entered the front of our house and the crashing waves broke the bricked front of the house and tore the storm shutters from the house. We also had 6 to 8 inch sized tree limbs from the large oak trees fall onto our new roof. Had we not installed your roofing, we would have had limbs penetrating our old asphalt roofing and had much more damage to the contents of our house. The only damage to the roof was a few very small dents where the large limbs had landed. One had to really search to even see the dents. I am very thankful that we installed your company's roofing.

I would also like to compliment the crew that installed the roof. They were a very organized and hard working group. Everyone knew his task and performed the task in a professional manner. The crew leader was an efficient and easy to talk to man. I don't recall his last name, but his first name was "Jose".

Thank you for the fine job your company did on my roof.

Yours truly,

Marvin J. Hopf
